

Dear colleagues,

Several short-term postdoctoral fellowships (3-5 months) are available at the Faculty of Medicine, Institute of Biochemistry and Molecular Genetics.

We are looking for researchers holding PhD in biomedicine, biosciences, bioinformatics or related fields who would like to get involved in research into genomic and epigenomic markers and inflammatory pathways of COVID-19. The aim is to improve the understanding of the pathogenesis of SARS-CoV-2 and to identify biological markers of SARS-CoV-2 infection, the course of COVID-19 disease and the response to treatment.

Postdoctoral fellowships are available until the end of 2021, the start date can be agreed with the candidate. Postdoctoral researchers will be employed full-time till 31.12.2021 at the University of Ljubljana, Faculty of Medicine, all health and social benefits included. The work will take place at the Institute of Biochemistry and Molecular Genetics, UL, Faculty of Medicine, in the laboratory of prof. Vita Dolžan, MD PhD (<http://ibk.mf.uni-lj.si/people/dolzan>).

We are looking for motivated candidates, capable of teamwork, who wish to get more experience in the field of biomarker research, pharmacogenomics and personalized medicine. Previous expertise in biochemistry, biotechnology, molecular biology, genomics, epigenomics, bioinformatics or biostatistics is desirable. Priority will be given to candidates with EU citizenship due to limited time for administrative procedures, however all eligible candidates are encouraged to apply.

We believe that the gained expertise and skills will increase the researcher's competences in the respective fields and will have a positive impact on their future careers.

Interested candidates should contact prof. Vita Dolžan (vita.dolzan@mf.uni-lj.si) for more information.

Kind regards,

Vita Dolžan

Head of the Pharmacogenetics Laboratory
